International Fund Performance

OCTOBER 2020

utmost[™]
WEALTH SOLUTIONS

International Fund Performance

As our client, you have the opportunity to access an extensive range of top quality funds, hand-picked to maximise your investment opportunities. Most offer exciting potential for tax-efficient growth from a stable international location and each is managed by world-class professional asset managers. The funds selection offers a large range of risk profiles to meet the variety of client needs. In addition, each has been risk-rated to help you select the funds that most closely match your investment aims. A summary of each risk category is shown here. These funds are related to our full fund range of investment-linked assurance schemes and further details are available in our International Fund Selection Brochure.

Past performance is not indicative of future performance. Investors and/or their investment advisers are responsible for their investment decisions and any choice of funds is entirely at their own risk. Please note that investment performance (as well as the income accruing to an investment) may go down as well as up. The performance figures are net of all fund charges but do not take account of any initial charge.

These performance figures should be read in conjunction with the relevant principal brochure, as fees and charges will impact negatively on individual investment returns.

This document should not be construed as a distribution, an offer to sell, or a solicitation to buy any funds by Utmost PanEurope in any particular jurisdictions or country where such distribution or use would be contrary to the laws or regulations of that jurisdiction.

Synthetic Risk and Reward Profile

Industry Standard

To help you select the funds that best fit with your approach to risk, Utmost PanEurope use the Synthetic Risk and Reward Indicator (SRRI)[^].

The indicator is calculated based on the volatility of the fund for the past five years and the values obtained are translated into one of the seven risk categories available based on pre-defined volatility intervals.

Risk Classes

Low number = Low volatility, High number = High volatility

	Risk Scale	Annualised Volatility Intervals	
		Equal or Above	Less than
	U*	-	-
Potentially lower reward	1	0.0%	0.5%
	2	0.5%	2%
	3	2%	5%
	4	5%	10%
Potentially higher reward	5	10%	15%
	6	15%	25%
	7	25%	-

*Funds marked with the symbol 'U' indicate that there is currently insufficient data available to calculate an SRRI.

Not all funds on the Utmost PanEurope unit-linked fund range can be assigned a synthetic risk and reward indicator. This may occur where not all of the relevant calculation information is available. For example, if the fund is less than 5 years old, the annualised volatility over 5 years cannot be calculated. These funds are indicated with a 'U' symbol.

Each fund on the unit-linked fund range has been assigned a risk category where possible. For example, funds with very low volatility will have a 1 or 2 rating on the risk scale. These funds generally have a more cautious approach with little or no exposure to equity markets and usually invest in cash or money market securities. You should be aware that for funds considered lower risk, the potential for reward will be lower as these funds are expected to yield lower returns than funds with a high equity exposure.

Funds with high volatility will have a 6 or 7 rating on the risk scale. These funds tend to have a high exposure to less developed, emerging equity markets or use high risk alternative assets within their investment strategy. Over the long term, exposure to equity markets could provide the opportunity for higher investment returns however it also brings a higher degree of investment risk. Although investment gains could be made when markets are buoyant, losses can quickly occur when markets take a downturn. You must therefore be prepared not only for the potential for higher returns but also the potential for higher losses when investing in these types of funds.

Synthetic Risk and Reward Profile

Risk Scale

You should note that investment involves risk. Past performance is not indicative of future performance. Investors and/or their investment advisers are responsible for their investment decisions and any choice of investment options is entirely at their own risk. Please note that investment performance (as well as the income accruing to the investment) may go down as well as up.

^The 'Synthetic Risk and Reward Indicator (SRRRI) was defined in 2009 by the Committee of European Securities Regulators (CESR) with the aim of providing investors with a method of assessing an underlying fund's risk. This SRRRI calculation has been provided by Morningstar based on guidelines provided by the European Securities and Markets Authority (ESMA) and Morningstar's interpretation, methodology and implementation of said guidelines.

Important Notes

~ Annualised Volatility Intervals reflect the level of risk borne by the fund and, therefore, its position on the risk scale. Volatility is a measure of variance of a financial instrument's price over a particular time period, which means the greater the movement in fund prices, the more volatile the fund's performance is. Funds with high volatility are generally associated with higher risk but potentially higher reward. Funds with low volatility are generally associated with lower risk but with potentially lower reward.
